Dear Dr. Lederberg,

Doctor Horecker requested that I send you some of our alkaline phosphatase preparation. I have sent under separate cover, 0.4 ml of our crystalline enzyme having an activity of 10,000 μ M of p-Nitrophenyl phosphate hydrolyzed /ml/hr at 28° in 1M TRIS pH 8.0, substrate concentration of 10^{-3} M. The crystals are suspended in 61% ammonium sulfate, 0.01M $MgCl_2$.

I would appreciate it if you would let me know if the sample arrived safely and how it worked in your hands.

Sincerely,
Michael Malamy

Horecker
